Introduction to French Phonology (Student's Manual) was developed by Robert Salazar over a two-year period during which he wrote draft materials, tried them out in class, and revised them to reflect the response of students and instructors. It is a little more than the name implies since it goes beyond matters of pronunciation to include explanations and drills on a few fundamental structures of French, particularly on the form and use of high frequency verbs. In its use at the Foreign Service Institute it serves as the initial syllabus for beginning students, preceding the *French Basic Course*. It is the exclusive syllabus for the first three to six weeks of full-time French instruction for beginning students. Mr. Salazar is a supervising linguist in this French section of the School of Language Studies.

The preparation of the textbook and the accompanying tape recordings was undertaken at the suggestion of Dr. C. Cleland Harris, Chairman of the Department of Romance Languages of the Foreign Service Institute. The manner of presentation was somewhat influenced by an unpublished programmed introduction to Polish written by Shirley Lowe at the Foreign Service Institute about 1966.

French instructors at FSI whose comments were particularly useful include Lydie Stefanopoulos, Chantal Clarke, Christine Schloesing, and Francoise Velez.

The preliminary versions were typed by Josette Howarth. Joann T. Meeks, a supervising linguist in the Department of Romance Language, read the text and made a number of helpful suggestions on the English explanations. Marianne L. Adams, Editor of FSI language publications, made useful editorial suggestions. Camera copy for the present edition was typed by Maryko Deemer of the School of Language Studies editorial office. The cover and title page were designed by John McClelland of the FSI Audio Visual Staff with the assistance of Joseph Sadote, Head of the unit.

Voice recordings play a central role in language instructional materials which are intended in any sense for self-study purposes. The tape recordings which complement the printed materials in this volume were voiced by Monique Cossard, Chairperson of the French language section, and the author, Robert Salazar. The recordings were made in the FSI language laboratory under the technical guidance of Jose Ramirez.

A companion volume *Introduction to French Phonology (Instructor's Manual)* contains directions and suggestions for the use of the materials presented in the student's manual.

INTRODUCTION TO FRENCH PHONOLOGY

INTRODUCTION

If you are willing to put in many hours of hard work reading, listening to, and imitating French sounds, words, and utterances, you can succeed in attaining a high degree of competence in French pronunciation and a basic knowledge of how French sounds correspond to the writing system.

The material that you are about to work with is divided into ten chapters. Each chapter has three parts.

Part One: Presentation of a short dialogue for memorization.

Part Two: Manipulation, correction, and reinforcement of the sounds presented in the dialogues involving a change of context, individual study, reading preparation and reading exercises.

Part Three: Tests.

Part One usually consists of 140 to 150 frames dealing with the pronunciation of sounds contained in the dialogue. Each frame contains a task that you must accomplish before you are ready to move ahead to the next one.

You can learn Part One in about one hour in the language laboratory. That hour allows you to go over part one twice before entering the classroom for a check out session. Part Two will require another hour of laboratory work before you are ready to practice the language with your instructor. Part Three, Tests, are administered both in the laboratory and in the classroom.

Here is a list of activities that you will be required to perform in the language laboratory followed by the notation as it appears in the text.

- a. Listening only. ()
- b. Listening and imitating. ()x
- c. Reading French while listening to French. ()
- d. Looking at English while listening to its French equivalent. (FR)
- e. Listening to French and then imitating French while reading French. ()x
- f. Finding the solution to a problem or testing yourself. (answers are indicated in the left hand margin).

INTRODUCTION TO FRENCH PHONOLOGY

g. Reading the sentence before your instructor does. x()

Here are typical frames from Chapter One, Part One. The question mark shows that what you hear is a question.

For example:

1. Listen to the following conversation in French.

A: (?)
B: ()
A: (?)
B: ()

11. Listen and imitate this French word.

()x ()x ()x

22. Listen to the (R) right/(W) wrong contrast.

(R)/(W) (R)/(W) (R)/(W)

23. Which is the right one? Number 1 or number 2?

(1)/(2) (1)/(2)

(2)

89. Answer the following questions before your instructor answers for you.

Instructor: (Q)
You: _____ ()

91. This time you ask the question and listen to the answer.

(begin)
You: _____?
Instructor: _____(A)

Since all frames are important, your interest in participating fully in all of them should be sustained from Chapter One through Ten. If at anytime you feel that you need more practice on previously introduced pronunciation items, you should stop your tape recorder, rewind your tape, go back to where you feel comfortable with your production, and begin again.

If upon completion of a particular frame you feel that that task was easy or even unnecessary, it probably means that you were on target--whether imitating, finding a solution to a problem, or reading. It means that the task was successfully completed and that you are ready to move to the next one. On the

INTRODUCTION TO FRENCH PHONOLOGY

other hand, if you do not share any of the feelings described above after having completed a task you need more work on that particular task.

Even though we have tried to simplify the description of selected material for oral production of the French sound system, we have introduced all the elements necessary for good pronunciation.

Where there are competing pronunciations, we have chosen to teach only one variety. We present both alternatives for listening but only one for repetition. The differences are minor and so very much a part of colloquial French, that many native speakers are not conscious of them. As we move along in our lessons, we will point out such variation in French sounds so that you will be aware of them when conversing or drilling with your instructors.

We hope that you will enjoy learning French in the classroom as well as in the language laboratory, and that you will acquire a useful level of proficiency by the time you are ready to leave for your assignment overseas.
